1 Introduction

Fun fact: with a citation index of more than 45000, one of the most cited mathematics papers of all time is Zadeh [1965]!

Here are some guidelines for paper writing:

- *The five pivotal paragraphs in a paper*, by Brian Gill.
dynamicecology.wordpress.com/2016/02/24/the-5-pivotal-paragraphs-in-a-paper
- *How to write a mathematical modelling paper* (webinar materials by Dr. Stacey Smith?).
Webinar Video: <https://mbi.osu.edu/events/webinar-how-write-modelling-paper>
Slides/Handout: mysite.science.uottawa.ca/rsmith43/paperwritinghandouts.htm
- BibTeX is an excellent way to manage your citation information, but don't maintain those references using a text editor! Instead, it's much easier to use the cross-platform (free) software **JabRef** (www.jabref.org). Pro tip: Download entries to your *.bib file using JabRef's "New BibTeX Entry" button to just paste the DOI into the ID-based entry generator -- it will download and add the entry for you.
- For more help, see Paul Hurtado's L^AT_EX resources at <https://www.pauljhurtado.com/latex/>.
