Chapter 1 Plots

The purpose of this assignment is to get a little experience making R Markdown documents as a way of nicely formatting output from R code.

Assignment: Modify the R Markdown file at http://www.pauljhurtado.com/teaching/SP16/Chapter1-plots-HW.Rmd so that it reproduces all the output from the R script http://www.stat.tamu.edu/~sheather/book/docs/rcode/Chapter1.R.

The resulting document should look something like this if done correctly: http://www.pauljhurtado.com/teaching/SP16/Chapter1-plots.pdf.

As you may recall in class, I've done the plots for the first dataset for you. Remember that you will need to download each of the four data sets from http://www.stat.tamu.edu/~sheather/book/data_sets.php, and set your working directory (under the "Session" menu in Rstudio) appropriately. (And yes, this really is as easy as copying the blocks of R code for each dataset into this document into the appropriate places!)

Need help? First, see http://rmarkdown.rstudio.com. Especially the resources under **Learning More** (http://rmarkdown.rstudio.com/#learning-more). If you still have questions, feel free to email your instructor.

DUE Thursday (1/28) before class by compiling your document as a PDF and naming it according to the format **SURNAME-HW1.pdf**, and emailing that PDF to the instructor.
